

CLEANING & DISINFECTION OF DOMESTIC TANKS

Your water tank must be regularly cleaned (at least every 6 months) to ensure a water of good quality.

Follow the steps below:

1. Brush the inner surfaces of the tank.
2. Wash out all dirty waters
3. Wash again with clean water and flush out all the dirty water
4. Fill the tank with clean water.
5. Add ONE CAP of "Eau de Javel" for each one cubic metre (or 1000 L) water.
6. Leave overnight.
7. The water is now safe for consumption.

THINGS TO AVOID

- Presence of algae in your tank.
- Presence of insects & mosquito larvae.
- Presence of mud/silt deposit inside your tank.
- Presence of foreign materials such as dead leaves.

SOME TIPS

Tank cover must always be closed to avoid infiltration of microbes, insects, rats or leaves and to avoid evaporation of residual chlorine.

-Your tap water has a white coloration?

-This is due to the presence of small air bubbles. Fill a glass with water and let it stand for a few minutes; The air bubbles will disappear and your water will appear clear.

-After a water cut you may get unclean water! Let the water run for a few minutes so as to flush all the stagnant water in the network.

Did you know?

So preserve it..
